

## IDWeek 2017

### 5 Ways Attendees Can Learn about Technology's Impact on Antimicrobial Stewardship

This week thousands of dedicated infectious disease (ID) experts will gather in San Diego for IDWeek 2017 to collaborate, cooperate, and learn from each other. Together we will focus on many common challenges: perhaps none more urgent than the threat of antimicrobial resistance.

To protect patients, save money and meet the Joint Commission's new Antimicrobial Standard, we must embrace technology's role in our stewardship efforts. Through a powerful partnership, ILÚM Health Solutions and TEQQA are helping hospitals implement and leverage technology to fight antimicrobial resistance, support the stewardship team, and engage front-line clinicians.

Here are five ways you can increase your knowledge on this topic while attending IDWeek:

- 1. Stop by Booth #738.** Meet our executives, see a demo, and learn how we're partnering with hospitals to unlock and maximize the use of data.
- 2. Check out poster #708,** "Evaluating Patient-Specific Antibigrams," which will be presented on **Thursday, Oct. 5 from 12:30-2 PM.**
- 3. Come to the Learning Lounge** on **Friday, Oct. 6 from 10:15-11 AM.** to learn about "Precision Medicine in Infectious Diseases." Precision Medicine has been largely focused on cancer therapy. ILÚM and TEQQA are extending that paradigm to infectious diseases.
- 4. Check out poster #1078,** "Use of a Precision Antibiotic Therapy (PAT) Prediction Model to Identify Multidrug-Resistant (MDR) *Enterobacteriaceae* (IDWeek 2017)," which will be presented on **Friday, Oct. 6 from 12:30-2 PM.**
- 5. Follow @ilumhealth on Twitter.** We'll be live-tweeting from the conference.

If you would like to schedule a meet-up, please contact  
Glenn Borgmann at [glenn\\_borgmann@merck.com](mailto:glenn_borgmann@merck.com).

We look forward to being among such dedicated ID experts, and to working together to take our fight against antibiotic resistance to a new level.
